Chip Sweeper Extended Length Option (682991)

The Mueller Chip Sweeper used with small diameter steel fittings is now available in an extended length version. This option is beneficial when using H-17502 tees in 3" & 4" sizes. It allows an additional 8" of downward travel to assure chips are cleared or removed from the pipe when using these tees in line stopping applications. As with the standard length chip sweeper, the brush on the 682991 can be removed and replaced with the 682081 magnet to remove chips from the main.
